

MATLAB live script for a draft reproduction of Figures

This live script reproduces draft versions of Figures 1 through 8 from the paper *Atmosphere circulation patterns synchronize pan-Arctic glacier melt and permafrost thaw* by Sasgen et al. (2024). The data used for this reproduction are stored here <https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/XTETA5>.

The primary goal of this script is to facilitate the further use of the data. By producing the figures, we aim to clarify the units and demonstrate how the data are stored in the .mat file.

For additional information, please contact Ingo Sasgen at ingo.sasgen@awi.de.

```
clear all
```

Figure 1. Glacier and permafrost regions in the Arctic. (Figure 1b only)

```
load('FIG1b_DATA.mat', 'LONinit', 'LATinit', 'DATA1');
close(gcf);
subplot(1,3,1);
imagesc(DATA1);
xlabel('x-grid node');
ylabel('y-grid node');
title('Data');
colormap('jet');
cb=colorbar; cb.Label.String='Permafrost fraction (%)';

subplot(1,3,2);
imagesc(LONinit);
xlabel('x-grid node');
ylabel('y-grid node');
title('Latitude (°)');

subplot(1,3,3);
imagesc(LATinit);
xlabel('x-grid node');
ylabel('y-grid node');
title('Latitude (°)');
```

Figure 2. Time series of changes in glacier mass and active layer thickness.

```

load('FIG2_DATA.mat', 'DATA', 'META');
close(gcf)
for i = 1:size(DATA,2);
subplot(2,5,i);
t=DATA{i}(:,1);
y=DATA{i}(:,2);
e=DATA{i}(:,3);
name=META{1}{i};
errorbar(t,y,e); hold on;
plot(t,y)
title(name);
xlabel('Time (yr)')
ylabel('Specific mass change (m)');
if i>=9; ylabel('Active Layer Thickness (cm)'); end;
hold off
end

```

Figure 3 [NEED CHECKING!!!]. Correlation of glacier mass balance and active layer thickness in Arctic permafrost regions.

```

load('FIG3_DATA.mat', 'DATA', 'META')
close(gcf)
for i=1:size(DATA,2);
    LATinit=DATA{i}{1};
    LONinit=DATA{i}{2};
    DATA1=DATA{i}{3};
    %% Areas of significance
    SIG=DATA{i}{4};
subplot(2,4,i);
imagesc(DATA1);
title(META{i})
colormap('jet')
cb=colorbar; cb.Label.String='Correlation';
caxis([-1 1]);
xlabel('x-grid node')
ylabel('y-grid node')
end

```

Figure 4. Factor analysis of changes in glacier mass and active layer thickness.

```

load('FIG4_DATA.mat', 'DATA', 'META')
close(gcf)
imagesc(DATA); hold on;
set(gca, 'yticklabels', META);
set(gca, 'xtick', [1 2])
set(gca, 'XTickLabels', { 'Factor 1' , 'Factor 2' })
ylabel('Location');
colormap(jet);
caxis([-1 1]);
cb=colorbar;
cb.Label.String='Loading';
title('Maximum');

```

Figure 5. Time series and location composition of Arctic Impact Indices.

```

load('FIG5_DATA.mat', 'DATAp1', 'DATAp2', 'DATAp3', 'METAp1', 'METAp2', 'METAp3');
close(gcf)
